First Solar Takes On Ex-Nuclear Professional

February 3, 2013 Zachary Shahan

4 Share 1 Share 11 Share

A clean energy transformation will create jobs. Many studies have found that clean energy creates more jobs than fossil fuel and nuclear energy. That said, fossil fuel and nuclear companies and power plants will certainly lay off workers as they go out of business or change technologies. But the good news is: a clean energy job should be awaiting many of them. Here's on example:

First Solar recently hired Tim Reborn to take over as Senior Vice President of Product Development. Reborn has more than 30 years of experience in the business as a senior executive in the power generation and distribution industry. First Solar notes. "Most recently, he was CEO of Quail Creek Nuclear Specialty Services, a nuclear power industry construction company. Previously, he was Managing Director of Project Development at Quail Creek where he provided strategic support for clients in the energy, steel, fuel cell, construction, petroleum and manufacturing industries. Earlier executive positions include Merrill International and the U.S. Navy, where he served as a Nuclear Propulsion Program Planning Officer."
