July to stop Oiigenpatsu

ツイート < 1,774 | B! 38 | チェック | Recommend | 1. | 30

Morning, February 01, 2013

Committee Toyoshi (as dandruff) standards, "Sun thirty-one 田 more of the Nuclear Regulatory Commission to serve as coordinator of the building standards of safety equipment new is a condition of re-activated nuclear power plant eighteen in July (at the time, which came into force day), I have an idea of the "must meet the furnace running. Likely to be all the facilities sought by the due date (Fukui) Units 3 and 4 Oiigenpatsu Kansai Electric Power Co., Inc. is currently running very low. Before entering regular inspection of September, it was forced to stop operation is assured.

On this day, towards the new safety standards, the draft outline of the facilities has been decided.

When the (evacuated), as well as determining the installation of the filter to minimize the release of radioactive material, multiplexed piping material leading to reactor facilities measures to radiation earthquakes and vent to prevent rupture of the containment maintenance bases that work. Power supply system and cooling system as well, available in both fixed and portable.

Prepare for large-scale disasters and terrorism, in addition to the normal control room, control room maintenance sturdy second away from the reactor building. We want to be able to emergency cooling the reactor equipped with emergency power.

Apart from these, the tsunami of the largest that can be assumed even if hit, also required into watertight and maintenance of embankment not to penetrate to the site, such as installing door sturdy so that the water does not get into the building.

Increase of the bulk of the breakwater and distributed power generation equipment in emergency Oi, Kepco, but we are the construction of the embankment, the outlook for next year is completed. Development of sites and vent filters work is that going to be the year two thousand and fifteen.

Suppose also ahead of construction, it is necessary to pass the examination of the regulatory committee. I said, "is not going to spend a year, would not that also be a few weeks," said Tian and more.

Pressurized water reactors, such as the capacity of the containment Oi is large and immediate maintenance vent filter is not sought, Shizuoka Prefecture, Shiga Hokuriku and Chubu Electric Hamaoka (Niigata) TEPCO Kashiwazaki-Kariwa Ishikawa (In a boiling water reactor nuclear power plant, etc.) are required.

Re-operation of a boiling water nuclear power plant has become a certainty it can be a few years away at the earliest.

Handling of Oiigenpatsu. Who are aware of the possibility of being forced to stop Oiigenpatsu in July, in an interview with newspaper "In the future, the person in charge of the Kepco new rules on the application of safety standards and will be determined I commented that "I would like to respond to (gentleman) to monitor developments closely to what was decided.
