Study the health effects of exposure to children is minimal published Iwate Prefecture

2013.1.30 02:15

Province has announced the results of the second survey (86) was carried out on (nuked) internal radiation exposure of children by TEPCO Fukushima Daiichi nuclear power plant accident. The amount of radioactive cesium was evaluated in the urine is greatly reduced from the previous survey, "health effects is very small and".

Conducted in January this year from October last survey, 132 people in the target 86 people worked (March 2007-December 2011) the last time.

The largest number of children in three of the amount of radioactive cesium in two liters of urine per day, less than 1-2 is becquerel (3.4%). Then, 32 people (37.2%), 51 people is less than 1 Bq was not detected (59.3%).

33 people (25%), less than 1-2 becquerel is significantly reduced from the previous people were many and 25 (18.9%) is less than 2-3 Becquerel. Less than 0.01 mSv and 86 people were also in the calculation of the total cumulative dose of up to 70 years old.

2 liters of urine opinion is also the burden of children, experts from the "continuation of the investigation is not necessary," such as, but has come out, the county health department for the implementation of the next promotion "is also heard opinions of contributors I have "I want to decide Te.
