

Monitoring of Radioactive Concentrations in Nearby Sea of Fukushima Daiichi NPS

The Latest Results of I-131 Monitoring in Seawater by the Ministry of Education, Culture, Sports, Science and Technology (MEXT)

Sampling Point	Date	Surface (Bq/L)	Depth (Bq/L)
M-A	April 9	Not Detected	Not Detected
M-B	April 7	Not Detected	Not Detected
M1	April 9	Not Detected	Not Detected
M2	April 7	Not Detected	Not Detected
M3	April 9	77.4	Not Detected
M4	April 7	Not Detected	Not Detected
M5	April 9	8.58	Not Detected
M6	April 7	56.3	Not Detected
M7	April 9	14.1	Not Detected
M8	April 7	10.1	Not Detected
M9	April 9	13.6	10.5
M10	April 7	35.5	12.5

The Latest Results of I-131 Monitoring in Seawater by Tokyo Electric Power Co. (TEPCO)

Sampling Point	Date	(Bq/cm3)
T1	April 9	7.0
T2	April 9	13
T3	April 9	1.0
T4	April 9	0.98
T5	April 7	0.099
T6	April 7	0.04
T7	April 7	0.053
T8	April 7	0.03
T9	April 7	0.37
T10	April 7	0.16

Sampling Points by MEXT and TEPCO

Radioactive iodine and cesium beyond standards (intake limits) were detected in sand lances (sand eels) off the coast of Kitaibaraki City (about 60 km south of Fukushima Daiichi NPS).

Concentration of Iodine 131 in Nearby Sea of Fukushima Daiichi (1F) NPS (up to April 9)
